11. Close of meeting

Proposals for resolution

Resolution on appropriation of profit/loss (item 7b)

The board of directors proposes the following appropriation of funds:

Share premium reserve of SEK 10,119,790, profit brought forward of SEK 3,961,986 and this year's loss of SEK -6,152,217, in total SEK 7,929,559, be carried forward to the new balance sheet.

Furthermore, the board proposes that no dividends be paid out.

Resolution on remuneration to the board members and accountants (item 9)

The board proposes remuneration to the board to the amount of SEK 120,000 to be distributed among board members as the board sees fit. The board proposes remuneration to the auditor as per the approved invoice.

Election of board members and accountants (item 10)

The re-election of Margit Ferm, Claes Holmberg, Roy Jonebrant and Lars-Håkan Thorell as board members until next year's annual meeting is proposed. The board proposes the renewed appointment of chartered accountant Tomas Nilsson as auditor and the re-election of Marcus Hellsten as deputy auditor.

Documents prepared for the meeting

The Company's annual financial statement for the fiscal year 2015, as well as other documents required for the annual meeting, are available from the Company's web site (www.emotra.se) and are also provided upon request by the Company (see address above) from Tuesday April 5, 2016.

The shareholders are hereby informed of their right, in accordance with the Companies act, to request information at the annual meeting about circumstances that could affect the judgement of an item on the agenda, as well as any circumstances that could affect the judgement of the Company's financial standing.

Göteborg, March, 2016
EMOTRA AB

Emotra AB (publ) is a medical technology company that carries out research, development, clinical studies and marketing in the area of suicide prevention. The Company's method, EDOR™, is a proprietary, objective and quantitative diagnostic, psychophysiological test for detecting hyporeactivity in patients suffering from depression. During the test, the patient listens to a series of audio signals. The patient's response, in the form of very small changes in dermal electric conductivity, is measured and analysed. This extremely sensitive and specific test of suicidal risk has been developed as the result of research.

Board of Directors
